Professional Summary

Frontend Engineer with 6+ years of experience building scalable web and mobile applications using React, Next.js, React Native, Flutter, and TypeScript. Proven experience leading frontend delivery for fintech, mobility, and Web3 products, designing reusable component architectures, optimizing application performance, and shipping production software across international markets including Singapore, Japan, South Korea, Cambodia, and the United States.

Core Competencies

- Frontend Architecture
- Design Systems
- Performance Optimization
- Monorepo Architecture
- Component Libraries
- Accessibility
- State Management
- Responsive Design
- API Integration
- Agile Development
- Cross-functional Leadership

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Dart, HTML5, CSS3
Frontend: React.js, Next.js (App Router, SSR, SSG, ISR), React Native, TailwindCSS
State Management: Zustand, Context API, Riverpod, Provider
Web APIs: REST APIs, Firebase, Cloud Functions, GraphQL
Web3: Ethers.js, Wagmi, WalletConnect, RainbowKit, MetaMask, Coinbase Wallet
Developer Tools: Git, GitHub, GitLab, Postman, Turborepo
CI/CD & Deployment: GitHub Actions, Vercel, Circle CI
Design Systems: Storybook, Figma, ShadCN UI

Professional Experience

Frontend Engineer

Tada Mobility | Bengaluru, India

Aug 2025 - July 2026

- Led frontend development for **AR Service**, owning frontend architecture and production delivery while building **15+ production-ready screens** using React, Next.js, TypeScript, Tailwind CSS, and Zustand.
- Served as the primary frontend owner for AR Service, driving frontend architecture, reviewing **75+ pull requests**, mentoring engineers, coordinating with backend teams, and ensuring successful production deployments.
- Developed and delivered **10+** production features for **Musubi**, implementing lending workflows, tokenized asset management, wallet-authenticated transactions, NFT ownership, redemption flows, and marketplace experiences for Japanese users.
- Engineered scalable web and mobile applications using React, Next.js, React Native, and TypeScript within a Turborepo-based monorepo and contributing to **40+ production feature** releases across fintech, mobility, and Web3 platforms.
- Designed reusable component architecture with Tailwind CSS, Zustand, and Storybook, creating 40+ reusable UI components that reduced duplicate implementation by approximately **35%** and accelerated feature development.
- Optimized frontend performance through code splitting, lazy loading, memoization, rendering and state management, image optimization, and bundle optimization, reducing initial page load time by approximately **25%** while improving Core Web Vitals.
- Implemented SSR, SSG, ISR, Server Components, and the Next.js App Router to improve SEO, scalability, and application performance.
- Delivered customer-facing features supporting ride booking, payments, and engagement workflows for users across Singapore, Japan, South Korea, Cambodia, and the United States, building responsive and accessible experiences across web and mobile platforms.

- Developed modular frontend solutions for TADA Mini and DePIN initiatives, enabling scalable application architecture, reusable business modules, and faster product delivery.
- Partnered with cross-functional teams of 12+ engineers, designers, QA engineers, and product managers, participating in sprint planning, technical discussions, code reviews, release planning, and production deployments.

Frontend & Flutter Developer

Zeeve | Bengaluru, India (Remote)

Jun 2021 – Jul 2025

- Delivered frontend solutions across **8+ blockchain products**, including validator management dashboards, node sale platforms, blockchain explorers, and Web3 administration portals.
- Implemented secure wallet authentication and transaction workflows by integrating MetaMask, Coinbase Wallet, WalletConnect, RainbowKit, Wagmi, and Ethers.js, enabling staking, governance, wallet connectivity, NFT interactions, and blockchain transaction experiences.
- Designed and delivered **4+ cross-platform** Flutter applications supporting blockchain infrastructure monitoring, validator operations, wallet management, and real-time infrastructure visibility across Android and iOS.
- Built and maintained a reusable design system and Storybook component library containing 70+ reusable components, improving UI consistency, reducing development effort, and accelerating feature delivery across multiple engineering teams.
- Modernized legacy React applications by refactoring **30+ frontend modules**, improving maintainability, reducing technical debt, optimizing rendering performance, and enhancing overall user experience.
- Improved frontend quality by implementing semantic HTML, responsive design, keyboard navigation, ARIA attributes, and WCAG accessibility standards, delivering inclusive user experiences across browsers and devices.
- Optimized application performance through component memoization, efficient rendering strategies, lazy loading, code splitting, and API optimization, improving responsiveness and reducing unnecessary re-renders.
- Collaborated with Agile product teams comprising 15+ engineers, designers, DevOps engineers, QA engineers, and product managers to deliver high-quality production releases across multiple blockchain products.

Developer Intern

Vidyutthantra OPC Pvt Ltd | Bengaluru, India

Oct 2020 – May 2021

- Developed Flutter mobile application modules for Android and iOS, building responsive and maintainable user interfaces using reusable widget architecture.
- Designed and implemented **20+** reusable Flutter widgets, improving UI consistency, reducing duplicate development effort, and accelerating feature implementation.
- Integrated Firebase Authentication, Cloud Firestore, Analytics, and REST APIs, enabling secure user management, backend communication, and application usage tracking.

Education

B.Sc - Electronics, Mathematics & Computer Science
Seshadripuram First Grade College, Bengaluru University
2016 – 2019
